

# The Fantasy League Weekly Report™

## 2023 Fantasy Football Analytics League: A League

Weeks 1 - 5

By Joey Schiazza

## Boned Index

The metric that started it all. It may not be the best, it may not be fully understood, but it's near and dear to my heart. This measures how your opponents perform against you, compared to how they perform against everyone else.

| Manager   | Week 2 | Rank | Week 3 | Rank | Week 4 | Rank | Week 5 | Rank | Difference | Rank Δ |
|-----------|--------|------|--------|------|--------|------|--------|------|------------|--------|
| Tony      | 19.6%  | 10   | -1.2%  | 5    | 5.5%   | 9    | 12.6%  | 12   | 7.0%       | 3      |
| RVIII     | 6.4%   | 8    | 18.4%  | 11   | 15.6%  | 12   | 11.4%  | 11   | -4.3%      | -1     |
| Kutys     | 57.9%  | 12   | 32.6%  | 12   | 14.1%  | 11   | 11.3%  | 10   | -2.8%      | -1     |
| Doyle     | 2.5%   | 7    | 7.2%   | 9    | -0.1%  | 6    | 6.4%   | 9    | 6.5%       | 3      |

## Freaky Friday

Based on the 1973 and 2003 movies where two people swap bodies for an extended period of time. This analysis shows the amount of wins that you would have if you had to play another manager's schedule for the entire year to this point. This analysis is helpful in figuring out who is the strongest manager independent of their schedule. This can also measure who has had the toughest schedule to this point.

| Number of Wins Given that... |           | Played This Manager's Schedule |       |         |        |       |          |      |      |        |       |       |     | Total | Rank | Max | Avg  | Min |

### Between High Over Low Evaluation

The Between High Over Low Evaluation is a measure of how close your matchups are and how a few points in either direction could have changed the outcome of your season.

| Team      | What if I Scored ___ More Points Every Week |    |      |   |     |   |    | BHOLE | BHOLE     |

### Studs to Duds Analysis

The Stud to Dud Analysis is a count of how many times a single player "went off" or a single player significantly under performed. Stud is defined as more than double their projection with at least 20 actual points. Dud is defined as scoring only 25% of thier projection given that they were projected to produce at least 10+ points. This only measures the starters.

| Team      | Studs | Stud-ed On | Duds | Dud-ed On | S2D Diff |
|-----------|-------|------------|------|-----------|----------|
| RVIII     | 3     | 0          | 1    | 3         | 5        |
| Doyle     | 0     | 0          | 1    | 2         | 1        |
| Kennedy   | 3     | 0          | 2    | 2         | 3        |
| Parker    | 1     | 2          | 2    | 5         | 2        |
| Huegy     | 0     | 0          | 1    | 1         | 0        |
| Matty Kos | 0     | 1          | 5    | 2         | -4       |

## Grower or Shower

The Grower or Shower Metric, at the core, is a measure of how many wins you would expect to have compared to how many wins you actually have. Expected wins are calculated based on you and your opponents, actual score, historical average, and historical standard deviation. The expected wins is blended with 3 other scenarios (actual points in a given week vs opponents historical average, your historical average vs opponents actual points, your historical average vs opponents historical average). The blend of these measures of wins is compared to your actual wins to see if you performed better or worse than your record.

| Team     | Win Probability |        |        |        |        |        |        |        |        |         |         |         |         | 0.8       | 0.075                | 0.075                | 0.05                 | <---- Weights |              |      |

## Managerial Expertise

This section of the "Manager Expertise Analysis" takes a look at how well you set your lineup. Efficiency is a measure of how close to the optimal lineup you were. (Note that a high efficiency could also indicate that your bench sucks.)

This section of the "Manager Expertise Analysis" takes a look at how much a "Yahoo Sheep" you were. It takes a look at the times you completely followed the Yahoo projection and the times you didn't. In the times that you didn't follow the Yahoo projections, this section examines if that was beneficial or not. Wins added calculated the number of games you won (or lost) because you opted to not follow the Yahoo projections. %Sheep is the ratio of games you were a sheep. Plums is a ratio of efficiency of nonsheep over sheep.

This section of the "Manager Expertise Analysis" takes a look at how your team compares to a "Baseline" Team and Optimal FA Team. These measures are defined in the footnotes.

This section of the "Manager Expertise Analysis" takes a look at how well you were at starting and benching Studs and Duds.

| Team      | Actual Points For | Optimal Points For | Efficiency | # Games Using Yahoo Optimal Proj | Efficiency of those Games | # Games Not Using Yahoo Optimal Proj | Efficiency of those Games | Wins Added | Losses added | Net Added | % Sheep | Ability to Feel Plums | VOBL <sup>(1)</sup> | VOBM <sup>(2)</sup> | WOBL <sup>(3)</sup> | WOBM <sup>(4)</sup> | All Studs (Started and Benched) | Studs That Were Benched | All Duds (Started and Benched) | Duds That Were Started |

Notes:

- 1.) VOBL = Value Over Baseline
- 2.) VOBM = Value Over Bench Mob
- 3.) WOBL = Wins Over Baseline
- 4.) WOBM = Wins Over Bench Mob
- 5.) Baseline is the collection of the 12th best player at each position. This is a proxy to be the worst startable player at each position.
- 6.) Bench Mob is the collection the best Free Agent players for each week.

### Value Over Baseline -- Expanded

This chart helps indenfy how your team compares to a "Baseline" team. Baseline team is defined as the collection of the 12th best player at each position each week. This is a proxy to be the worst "startable" player at each postion. This chart can be helpful in figuring out where your team struggles and where it excels.

| Team      | VOBL <sup>(1)</sup> | QB1    | WR1    | WR2    | RB1    | RB2    | TE1    | W/R/T1 | DEF1   | K1     |
|-----------|---------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| RVIII     | 23.6                | -7.40  | 21.30  | -8.80  | 32.10  | 1.30   | -15.60 | -15.30 | 7.00   | 9.00   |

### It's Not The Size of Your Draft, It's How You Use It

These charts help identify the best drafter. Everyone thinks they are the best drafter, and all their friends collectively huffed glue prior to drafting, but these charts separate the good from the great. The top chart displays the points your starting lineup has generated grouped by draft rounds. Sometimes you draft a player but don't start them until they have earned your trust. That is where the second chart comes in handy. The second chart looks at your optimal lineup each week and shows how many points per round this lineup would have produced. To clarify for those of you at the bottom of the standings, if you did not personally draft this player, they will end up in the post-draft (or maybe "in season") category regardless of which round they were drafted.

#### Historical Points From Rounds

#### Optimal Points From Rounds
